Our main products are Rohu, Migal, Katla and Hilsa. Our company's owned fishing boats caught 60-80% of the hilsa produced from Myanmar annually. On the other hand, our fish farmers produced 40-50% of Rohu, Katla and Migal carps. Since 1990s, we are known as one of the top quality fish provider from Yangon, Myanmar.

Rohu fish white texture, non-oily and tasty. It is an excellent source of high quality protein and also rich in omega 3 fatty acids, beneficial to the heart. The Rohu is a species of fish of the carp family, found in rivers in South Asia. Rohu is the most popular farmed fish breed in Myanmar and accounts for about 80 per-cent of all farmed fish.

Catla Catla or Catla, also known as the major South Asian carp, is an economically important South Asian freshwater fish in the carp family Cyprinidae. Migal - The mrigal carp, also known as the white carp, is a species of ray-finned fish in the carp family. Native to streams and rivers in India, the only surviving wild population is in the Cauvery River, leading to its IUCN rating as vulnerable.

Hilsa - (sustainably wild caught from the sea) The ilish, romanized: ilíś; also known as the ilishi, hilsa, hilsa herring or hilsa shad, is a species of fish related to the herring, in the family Clupeidae.
